

Anzin, january 2010

## DDIS moves offices to Anzin

*DDIS headquarters has relocated from Valenciennes to larger, more modern premises in Anzin.*

Located in the North of France next to Valenciennes, Anzin belongs to the metropolitan area of Valenciennes.

Since the new complex is in the industrial park Europescout, these new premises meet more than adequately both DDIS immediate and future needs.

First of all the Escaut Canal allows DDIS to ship some elements of its windmills to Dunkerque or Anvers.

Besides, the industrial partner of DDIS could be housed in the renovated industrial wastelands of Norzinco.

Given that these buildings are one hundred two thousand and three square meters, DDIS can easily gather its technological center and its manufacturing activities.

Last but not least advantage, the huge area of this land will allow DDIS to set up new offices in the back of the existing premises.

As well as being closer to its partners, DDIS wants to provide good working conditions to its workers.
